No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 3, P

                                                                                                                                                                                                                                                δλ
                                                                                                                                                                                                                                                                                                              ã
             ; Patent No. US20020013958al
; GENERAL INCPRARATION:
APPLICANT: Lalgudi, Raghmath V.
APPLICANT: Lalgudi, Radigaki, Laura Y. (Ito)
APPLICANT: Sherman, Braday K.
TILLE OF INVENTION: POLYNUCLEOTIDES AND POLYPEPTIDES DERIVED FROM CORN SEEDLING
FILE REFERENCE: PL-0012-1 CON
CURRENT APPLICATION NUMBER: US/09/923,876
CURRENT FILING DATE: 1999-04-21
PRIOR PLILOG DATE: 1999-04-21
PRIOR PLICATION NUMBER: 60/085,331
PRIOR FILING DATE: 1998-05-05
NUMBER OF SEQ ID NOS: 6332
SOFTWARE: PERL PROGRAM
SEQ ID NO 2788
SEQ ID NO 2788
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GlyPheGlyArgHisGlyGlyGlyValGlnGlnHisValValLysGluLysPheGluGlu 40

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

J. MOLL. BIOL. 279:973-986(1998).

FUNCTION: MULTIFUNCTIONAL TRANSCRIPTION FACTOR THAT EXHIBITS
POSITIVE AND NEGATIVE CONTROL ON A LARGE NUMBER OF CELLULAR AND VIRAL GENES BY BINDING TO SITES OVERLAPPING THE TRANSCRIPTION START SITE. MAY PLAY AN IMPORTANT ROLE IN DEVELOPMENT AND DIFFERENTIATION. THE FUNCTION OF YYL AS AN ACTIVATOR OR A REPRESSOR IS SPECIFIED BY THE PRESENCE OF OTHER PROTEINS. FOR EXAMPLE IT ACTS AS A REPRESSOR IN ABSENCE OF ADENOVIRUS ELA PROTEIN BUT AS AN ACTIVATOR IN ITS PRESENCE.

FROTEIN BUT AS AN ACTIVATOR IN ITS PRESENCE.

SUBCELLULAR LOCATION: NUCLEAR. ASSOCIATED WITH THE NUCLEAR MATRIX.

SIMILARITY: BELONGS TO THE KRUEPPEL FAMILY OF C242-TYPE ZINC-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDILINE-9815291; PubMed-9493912;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                             510

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

On Oct 17, 2001 this sequence version replaced gi:13430001.

Genes were predicted from the integrated results of the following:
(October 1998 version). The genomic sequence was searched against

NCBI NonRedundant Protein database, nr

(ftp://ncbi.nlm.nih.gov/blast/db) and the cDNA sequence database at

RGP. Protein homologies of the coding regions were searched against

NCBI NonRedundant Protein database with BLASTP2.0. ESTS represent

                                                                                                                            * NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces is believed to be correct as given, however the sizes of the gaps between them are based on estimates that have provided by the submittor.

* This sequence will be replaced by the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                         CDS
                     the identified cDNA sequences using BLASTN 2.0 with the corresponding DDBJ accession no. and RGP clone ID.

A gene with identity or significant homology to a protein is classified based on the protein name to indicate the homology level such as same name, 'putative-' and 'like protein. A gene without significant homology to any protein but with EST homology (covering almost the entire length of partial sequence) is classified as an 'unknown' protein. A gene predicted with a gene prediction program is classified as a 'hypothetical' protein.

The orientation of the sequence is from SP6 to T7 of the PAC clone. Detailed information on overlap and assembly quality together with annotation of this entry is available at http://rgp.dna.affrc.go.jp/GenomeSeq.html.

NOTE: This is a 'working draft' sequence. It currently consists of 77 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
